RE: Letter of Recommendation

Dear Anthony:

During the 2010 construction season SiteWerx, Inc. completed the water distribution upgrade project for the Town of Brownville, Maine. Dirigo Engineering was the design engineer on the project and I was the project administrator for the Town. The project included nearly 10,000 feet of water main and 3,000 feet of water service piping upgrades in Brownville Junction, Maine. The construction cost for the project exceeded \$1 million dollars.

SiteWerx completed the project ahead of schedule and in accordance with Contract Documents. Some of the intangible value SiteWerx brought to the project included:

- A very experienced and knowledgeable Superintendent with a professional and positive attitude. The Superintendent was Mr. John Milligan and he spent extensive time planning ahead and was very good to work with.
- Laborers and equipment operators handled themselves with professionalism and were very courteous to the general public
- Equipment was well maintained and reliable
- Additional work requested by the Owner was accepted and handled very fairly
- There were few change orders
- Change orders were justified and requested by the Owner in most cases
- Project completion and cleanup was done expeditiously and not "dragged out"
- The punch list was small and completed within the requested time
- No complaints from subcontractors or material suppliers were received related to late payment, non-payment or for other reasons
- There were few complaints on the project and they were all handled immediately and professionally

The project went smoothly from beginning to the end and Dirigo Engineering appreciated SiteWerx efforts in the field and administratively. We would recommend SiteWerx, Inc. for

Mr. Anthony Gliddon

general construction and utility piping services to any client with confidence. We look forward to working with you again.

Sincerely,

Dirigo Engineering

James M. Lord, P.E.
Project Manager
